Jeffrey Lansford

Task1:
The reason why the book uses pointer to pointer because in oder
to use the insert function with the list, it needs an argument,
*sPtr, and the list in itself, is a pointer. Without this, the
function could not change the nodes to insert the value into the
list. This reasoning sounds good, but it is complex to use since you
can come across many problems with pointers not being used.

Test Cases for Task 2
1, 3, 2
a, c, b
1, a, 2, b, 3, c
